

JOB DESCRIPTION:

An small regional electric power utility located in the San Bernardino Mountains of California within proximity to Los Angeles has a new position open for a Energy Analyst. The Energy Analyst is accountable by ensuring optimization of the utilities energy resources. This position requires previous experience in a Regulated Electric Utility. Relocation is available for well qualified candidates.

Responsibilities

- Evaluates utility metering data for load profiles by rate class and for other analytical purposes
- Negotiates and manages transmission service contracts
- Conducts analysis of customer generation/integration with utility distribution
- Performs Renewable Energy Credit option analysis - economic benefits and costs
- Reviews actual vs. forecasted use of hourly market based energy

Requirements

- Bachelor's Degree in Engineering or Economics or related discipline
- Knowledge and experience with public utility tariffs
- Experience with rate/pricing of electricity for public electric utilities
- Experience with regulatory processes in a electric power utility
- Five years of electrical utility experience, including power generation
- Understanding of California energy market

Benefits

- Comprehensive Benefits including 401K, Health, Dental, Disability, PTO and others
- The ability to live in a peaceful, serene Mountain community away from the hustle but close to a major metropolitan area

Position type: Perm

Position location: San Bernadino, CA

Potential pay up to: 84 K \$ /Yr
