

Methane Harvest - Project Financial Analyst / Financial Analysis Manager

The Company: Methane Harvest is a start-up which builds, owns and operates combined heat and power (co-generation) facilities which use methane from municipal waste water treatment plants as fuel. Our projects usually are between 500 – 1,000 kW. We have a proven business model, little competition, a large potential market and are developing outstanding returns with mature technology.

The team is looking to add a talented financial analyst to work part time in energy project modeling. Over time, this person would be expected to take over all financial planning and analysis responsibilities. This position could lead to a full time internship or position with the company.

The candidate would work both independently and collaboratively with other members of the firm (who are based in Massachusetts, Connecticut, California and Florida), including directly with the CEO.

Requirements: We are looking an MBA candidate with experience or recent training in financial modeling of energy projects. Advantages could include having worked in renewable energy, on smaller independent power projects, with the Build-Own-Operate business model, or in a wastewater context. This individual would function in a critical role for the company, assessing investment returns for specific projects that will drive the company's long term success.

Compensation: Competitive and based on modeling experience.

Company Profile: The team consists of experienced business people and engineers with significant capacity to execute the business plan. We have a robust project pipeline and sales to our client municipalities.

Methane Harvest seeks to foster a culture of respect, trust, and openness and to be a happy place to work. We are an equal opportunity employer not because the government tells us we have to be, but because it is what we believe. Women, minorities of every variety, and those with physical or mental challenges are encouraged to apply. We are a national company based at the Cambridge Innovation Center in Kendall Square, Cambridge, Massachusetts.
